Subject: California Prop 65 PVC Electrical Cables Statement Rev 1.4

To Whom It May Concern:

Proposition 65, officially known as the Safe Drinking Water and Toxic Enforcement Act of 1986, was enacted as a ballot initiative in November 1986 in the state of California. The proposition protects the state's drinking water sources from being contaminated with chemicals known to cause cancer, birth defects or other reproductive harm, and requires businesses to inform Californians about exposures to such chemicals.

Proposition 65 requires the state to maintain and update a list of chemicals known to the state to cause cancer or reproductive toxicity.

It should be noted that simply because a component is subject to Prop 65 does not mean that a warning for the finished product is required. Prop 65 warning requirements are dependent on the anticipated level of exposure to components subject to Prop 65 resulting from foreseeable uses of a product. The warning requirements will only apply if the foreseeable and intended uses of a product containing these materials are likely to result in exposures above what are referred to as "significant risk" or "observable effect" levels. A determination of "significant risk" or "observable effect" can only be made with full knowledge of the end uses and applications of the products. Domtech Inc. does not control or have complete knowledge of the end uses to which customers put our materials. Therefore, the decision to include or not include a Prop 65 notice must ultimately be made by our customers.

Domtech Inc. electrical cable products manufactured with Polyvinyl Chloride (PVC) thermoplastic materials contain the following Prop 65 listed materials:

Substance	CAS No.	Weight**
Antimony trioxide	1309-64-4	1% – 5%
Vinyl Chloride	75-01-4	<5 ppm
Silica, crystalline (Quartz)	14808-60-7	<0.8%
Arsenic Oxide (As ₂ O ₃)*	1327-53-3	<50 ppm
Lead Oxide (PbO)*	1317-36-8	<50 ppm

*Not intentionally added, bound in antimony trioxide and is not considered to be biologically available.

**Weights shown are as a % or ppm of the total of the insulation and jacketing PVC materials and do not include the weight of the copper conductors.
